JANUARY 11-30 | 11AM-7PM

WE ARE UPPING THE ANTE!
120,000 HANDS TWO-LIGHT HOLD 'EM

Each hand starts with each player having 200 big blinds.
One big blind is \$100, and one small blind is \$50.

Hands Dealt: 115,756/120,000

BRAINS : (\$1,560,189)	LIBRATUS : \$1,560,189
DONG KIM : (\$84,054) LIBRATUS : \$84,054	JASON LES : (\$862,347) LIBRATUS : \$862,347
JIMMY CHOU : (\$338,347) LIBRATUS : \$338,347	DANIEL MCAULAY : (\$275,441) LIBRATUS : \$275,441

Parentheses indicate a negative number.

Analytics vs. AI

Artificial Intelligence

Machine Learning

Deep Learning

Levels of Big Data Maturity

Operating as a
"data service provider"
Self-serve data
Collaboration and
sharing analytics
across the enterprise

LEVEL 5 Data & Analytics as a Service

LEVEL 4 Enterprise Adoption

Leveraging use cases
for multiple LOBs
Integrated metadata, quality, and
governance across Big Data
Predictive insights integrated
into business operations

Leveraging discrete
LOB use cases
Structured and
unstructured analysis
Predictive analytics
applied to Big Data

LEVEL 3 Business Adoption

LEVEL 2 Technical Adoption

Using Big Data mostly
for storage/transform
Usage primarily by IT
Some Big Data
exploratory analytics

Thinking about it
Initial Big Data environment
in place
Proof-Of-Concept / Pilot

LEVEL 1 Infancy

Impact on Capital Markets

You can learn some of these stuffs in this course

COURSE SYLLABUS

YEAR COURSE OFFERED: 2019
SEMESTER COURSE OFFERED: Spring
DEPARTMENT: Electrical and Computer Engineering
COURSE NUMBER/ID: 8700
NAME OF COURSE: ECE 3340 - Numerical Methods for Elec. & Comp. Engineers
NAME OF INSTRUCTOR: Han Le

We will learn some very elementary concepts of data analytics as a part of sci./eng. data analysis

List of discussion/lecture topics

- Introduction and review of selected topics in electrical and computer engineering that serve as learning materials for the application of computational numerical methods.
- Binary system and numerical representation in digital computer.
- Numerical precisions and errors in computation.
- Polynomials, roots, zeros, and poles.
- Numerical Fourier transform techniques and applications. Laplace transform applications.
- Multivariate linear system and review of linear algebra: matrix and computation techniques.
- Stochastic processes, introduction to statistical analysis and data analytics.
- Differentiation and integration. Differential equations.

Think of this course ECE3340 as a **very small (baby) first step** toward advanced computing for the future.

- you don't have to have a PhD in comp. sci. to use the power of machine learning (not anymore than one has to be an aeronautics engineer to fly an airplane).
- all you have to be is an educated, intelligent user to make the most of it.
